-!- SIMILARITY: CONTAINS 1 INMUNOGLOBULIN-LIKE V-TYPE DOMAIN.
-!- SIMILARITY: CONTAINS 4 LINK DOMAINS.
-!- SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.
-!- SIMILARITY: CONTAINS 1 SOSHI (SCR) DOMAIN.
-!- SIMILARITY: CONTAINS 1 SUSHI (SCR) DOMAIN.
-!- SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY).

-!- DOMAIN: TWO GLOBULAR DOMAINS, G1 AND G2, COMPRISE THE AMINO TERMINIS OF THE PROTEOGLYCAN, WHILE ANOTHER GLOBULAR REGION, G3, MAKES UP THE COOH TERMINIS. G1 CONTAINS LINK DOMAINS AND THUS CONSISTS OF THREE DISULEIDE-BONDED LOOP STRUCTURES DESIGNATED AS THE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULFATE (KS) AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LIE BETWEEN G2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=86550698; PubMed=244893;

1- FUNCTION: THIS PROTEOGIVCAN IS A MAJOR COMPONENT OF EXTRACELLUIAR MATRIX OF CARTILAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEOGIVCAN IN CARTILAGE. IT BINDS AVIDLY TO HYALDRONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION. MAY PLAY A REGULATORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.

1- SUBCELLULAR LOCATION: SECRETED; EXTRACELLUIAR MATRIX (BY

THE CONTAINS MOSTLY CHONDROITIN SULFATE, BUT ALSO KERATAN SULFATE
CHAINS, N. TINKED AND O-LINKED OLIGOSACCHARIDES.
DISEASE: DEFECTS IN AGCI ARE THE CAUSE OF CARTILAGE MARRIX
DEFICIENCY (CMD), AN AUTOSOMAL RECESSIVE SYNDROME CHARACTERIZED BY
CELET PALATE, SHORT LIMBS, TAIL AND SNOUT. MUTATION IN STRAIN CMD
CAUSES ABSENCE OF AGGRECAN BY TRUNCATION OF THE PROTEIN (MUTATION
IN THE G1 DOMAIN).
SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE V-TYPE DOMAIN.
SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY).

DOMAIN: TWO GLOBULAR DOMAINS, G1 AND G2, COMPRISE THE AMINO
TERMINDS OF THE PROTEGGLYCAN, WHILE ANOTHER GLOBULAR REGION,
MAKES UP THE COOH TERMINUS. G1 CONTAINS LINK DOMAINS AND THUS
CONSISTS OF THREE DISCLEIDE-BONDED LOOPS STRUCTURES DESIGNATED AS
THE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULEPATE (KS)
AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LIE BETWEEN G2
                                                                                                                                                                                                                                                        PGCA_MOUSE STANDARD; PRT; 2132 AA.

84grecan core protein precursor (Cartilage-specific proteoglycan core protein) (CBPCP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the aggrecan gene.";
Nat. Genet. 7:1454-157(1994).
Nat. SPOTECGLYCAN IS A MAJOR COMPONENT OF THIS PROTEIN IS TO RESISTS TOOMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION. MAY PLAY A REGULATORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.

Mol. Biol. 281:885-897(1998).

-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(1,6)-D-glucosidic branch linkages in glycogen, amylopectin and their beta-limits dextrins. IntRages in MALTOSE.

-!- INDUCTION: BY MALTOSE.

-!- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                           Chen J.H., Chen Z.Y., Chow T.Y., Chen J.C., Tan S.T., Hsu W.H.; "Nucleotide sequence and expression of the isoamylase gene from an isoamylase-hyperproducing mutant, Pseudomonas amyloderamosa JD210."; Biochim.
